#### DETAILED ACTION

## Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 12, 13, 20, and 21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 12, 13, 20, and 21 are systems claims depending on method claims 1-11 and 14-19. The system claims in 12, 13, 20, and 21 do not distinctly point out the structural limitations in which the methods claims 1-11 and 14-19 do not disclose. Therefore, claims 12, 13, 20, and 21 are held indefinite limitations. For the purpose or expediting the prosecution of the application, examiner interprets that the system required to carry out the method is generic without actual structural limitation that distinctly required carrying out the methods.

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by *Doi et al* (US 4,907,156).

Doi et al anticipate all claimed features in claims 1-21.

Claims 1, 5, 7-10, 12, 13, 14-17, 20, and 21: Doi et al disclose in figure 7 where a

Application/Control Number: 10/721,827

Art Unit: 3768

method of identifying pathologic change in medical image data comprises obtaining images from image input device and image memory and subtracting two images taken at different times and extracting at least one feature from the subtraction image that includes abnormality within the region of interest and superimposing a computer aided diagnostic to be displayed on a display monitor. In addition figure 7 shows histogram determination and thresholding device to identify abnormal subjects in the image. Method above is carried out via computer.

Claims 2-3 and 18: Doi et al disclose in figure 8 where the method above further comprises of gray-level threholding from histogram obtained from steps in figure 7 and determining pathological changes and locating and distinguishing abnormality from artifact.

Claim 4: Doi et al disclose that the SNR suppression filter is a smoothing filter i.e. smooth masking filter to enhance the extraction feature (col. 5, lines 29-45).

Claims 6, 11, and 19: Doi et al's method above is applied to various areas in patient's body such as lung with overlapping rib bones.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William Jung, Ph.D. whose telephone number is 571-272-4739. The examiner can normally be reached on Mon-Fri 8:30 AM to 5 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eleni Mantis-Mercader can be reached on 571-272-4740. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
